

# Immunizations

 **TUBERCULIN SKIN TEST or T-SPOT BLOOD TEST**

How is two-step tuberculin skin testing done?

The two-step tuberculin skin test (TST) is used to detect individuals with past tuberculosis (TB) infection, who now have diminished skin test reactivity. This procedure will reduce the likelihood that a boosted reaction is later interpreted as a new infection.

Visit 1: Place the 1st TST

Visit 2: Return in 48-72 hours for the test to be read.

Visit 3: Place a 2nd TST. ( 1 week after the first visit )

Visit 4: Return in 48-72 hours for the test to be read.

FYI: We will accept 2 TB tests within the past year prior to class

 **HEPATITIS B IMMUNIZATION**

Series or signed a waiver of exemption. You may contact your health care provider or employer, if applicable,

 **FLU VACCINE**

“Influenza Season” means October through March of the following year. The County Health Department, doctor’s offices, some grocery stores or independent pharmacies provide this. Request a verification copy and submit this to the nursing department. for these records.

 **COVID – 19 Vaccine:**

The Colorado Department of Public Health and Environment rules require COVID-19 vaccination for staff and students in licensed healthcare settings such as nursing homes. Some facilities allow exemptions. All doses must be complete at least 2 weeks prior to the clinical rotation.
